

# Earth Friendly Paints

## Company Profile.

**Earth Friendly Paints** work to our core value of providing high quality paint whilst remaining environmentally responsible.

Recent estimates have concluded that some 14% (over 50 million litres) of paint sold per year is unused or stored in garages, sheds and cupboards. A very substantial amount of this unused paint ends up in landfill.

**Earth Friendly Paints** is the only company in the Tyne & Wear / Northumberland Area to supply one of the UK's only commercially restored waste paint which is reformulated to a high quality ecological emulsion paint.

## Eco Range.

**Earth Friendly Paints** are ecologically friendly and economically attractive, high quality emulsion paint.

- Ideal for all interior walls and ceilings, including dry plaster, woodchip, vinyl wallpaper and old paint finishes.
- High solids content - for excellent coverage (approx 30 sq/mt per 2.5lt)
- Durable - giving a long life
- Breathable - allows water vapour through paint film
- Low odour
- Low VOC
- Quick drying in 2-4 hours

All colours are available in **Matt**, **Eggshell** or **Silk** finishes.

## Other Info.

This information is for guidance only. Actual coverage and drying time will depend upon surface texture, porosity and environmental conditions.

We would recommend the purchase of sample pots for testing in situ due to variations in surface conditions and lighting. If purchasing multiple tins with different batch numbers please mix tins together before application as slight variations between batches may exist. For best results, ensure all surfaces are correctly prepared before painting.

For guidance on preparation, please refer to instructions on container. These colours and names come from many sources.
